

## Writing Convincing Arguments

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

# Writing Convincing Arguments

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

Can you convince a classmate?

# Writing Convincing Arguments

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

Can you convince a classmate? *Can you prove it?*

Can you convince a classmate? *Can you prove it?*

A *proof* is a finite list of logical deductions which establishes the truth of a statement.

Today: We will learn strategies for writing valid proofs.

# Counterintuitive Mathematics

Why are proofs necessary?

# Counterintuitive Mathematics

Why are proofs necessary?

These are known as the *Borwein integrals*:

$$\int_0^{\infty} \frac{\sin x}{x} dx = \frac{\pi}{2},$$

$$\int_0^{\infty} \frac{\sin x}{x} \frac{\sin(x/3)}{x/3} dx = \frac{\pi}{2},$$

⋮

$$\int_0^{\infty} \frac{\sin x}{x} \frac{\sin(x/3)}{x/3} \dots \frac{\sin(x/13)}{x/13} dx = \frac{\pi}{2}.$$

# Counterintuitive Mathematics

Why are proofs necessary?

The pattern is clear, right? Actually, **NO!**

$$\int_0^{\infty} \frac{\sin x}{x} \frac{\sin(x/3)}{x/3} \dots \frac{\sin(x/15)}{x/15} dx$$
$$= \frac{\pi}{2} - \frac{6879714958723010531\pi}{935615849440640907310521750000}.$$

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

▶ No.

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

- ▶ No. There are an odd number of squares, each tile covers an even number of squares.

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

- ▶ No. There are an odd number of squares, each tile covers an even number of squares.

Can you tile the second grid using  $1 \times 2$  tiles?

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

- ▶ No. There are an odd number of squares, each tile covers an even number of squares.

Can you tile the second grid using  $1 \times 2$  tiles? Color it.

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

- ▶ No. There are an odd number of squares, each tile covers an even number of squares.

Can you tile the second grid using  $1 \times 2$  tiles? Color it.

- ▶ No.

## Chessboard Tilings

Can you tile the first grid using  $1 \times 2$  tiles?

- ▶ No. There are an odd number of squares, each tile covers an even number of squares.

Can you tile the second grid using  $1 \times 2$  tiles? Color it.

- ▶ No. The board has more black squares than white squares.

## Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

## Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

## Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ .

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

Universal statements:  $\forall x P(x)$ .

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

Universal statements:  $\forall x P(x)$ .

- ▶ Let  $x$  be an *arbitrary* element of your universe.

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

Universal statements:  $\forall x P(x)$ .

- ▶ Let  $x$  be an *arbitrary* element of your universe.
- ▶ Then, prove  $P(x)$  holds for this generic  $x$ .

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

Universal statements:  $\forall x P(x)$ .

- ▶ Let  $x$  be an *arbitrary* element of your universe.
- ▶ Then, prove  $P(x)$  holds for this generic  $x$ .
- ▶ **Key idea:** Since your proof does not use anything special about  $x$ , your proof works equally well for *any*  $x$ .

# Dealing with Quantifiers

How do we prove statements like  $\exists x P(x)$  and  $\forall x P(x)$ ?

Existential statements:  $\exists x P(x)$ .

- ▶ Constructive proof: Find an *explicit* example of an  $x$  which satisfies  $P(x)$ .
- ▶ Non-constructive proof: Somehow prove the statement *without* finding a specific  $x$ . We will see this later today!

Universal statements:  $\forall x P(x)$ .

- ▶ Let  $x$  be an *arbitrary* element of your universe.
- ▶ Then, prove  $P(x)$  holds for this generic  $x$ .
- ▶ **Key idea:** Since your proof does not use anything special about  $x$ , your proof works equally well for *any*  $x$ .  
Thus, you proved  $\forall x P(x)$ .

## Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

## Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

Direct proof: Assume  $P$ , prove  $Q$ .

# Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

Direct proof: Assume  $P$ , prove  $Q$ .

Why is this valid?

# Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

Direct proof: Assume  $P$ , prove  $Q$ .

Why is this valid?

- ▶ If  $P$  is False, then the implication  $P \implies Q$  is automatically True (called *vacuously* True).

# Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

Direct proof: Assume  $P$ , prove  $Q$ .

Why is this valid?

- ▶ If  $P$  is False, then the implication  $P \implies Q$  is automatically True (called *vacuously* True).
- ▶ So, we only have to worry about showing that  $Q$  is True whenever  $P$  is True.

# Direct Proofs

Suppose you want to prove an implication  $P \implies Q$ .

Direct proof: Assume  $P$ , prove  $Q$ .

Why is this valid?

- ▶ If  $P$  is False, then the implication  $P \implies Q$  is automatically True (called *vacuously* True).
- ▶ So, we only have to worry about showing that  $Q$  is True whenever  $P$  is True.

*Remark:* If the hypothesis  $P$  is never satisfied, then the theorem is vacuously True.

## Direct Proofs

Direct proof: Assume  $P$ , prove  $Q$ .

Why is this valid?

- ▶ If  $P$  is False, then the implication  $P \implies Q$  is automatically True (called *vacuously* True).
- ▶ So, we only have to worry about showing that  $Q$  is True whenever  $P$  is True.

*Remark:* If the hypothesis  $P$  is never satisfied, then the theorem is vacuously True. “If unicorns exist, then I am bald.”

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ Example: Every integer divides 0

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ Example: Every integer divides 0 because for any  $a \in \mathbb{Z}$ , we have  $a \cdot 0 = 0$ .

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ Example: Every integer divides 0 because for any  $a \in \mathbb{Z}$ , we have  $a \cdot 0 = 0$ .
- ▶ Mathematical definitions require time to parse.

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ Example: Every integer divides 0 because for any  $a \in \mathbb{Z}$ , we have  $a \cdot 0 = 0$ .
- ▶ Mathematical definitions require time to parse. Read carefully!

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ Example: Every integer divides 0 because for any  $a \in \mathbb{Z}$ , we have  $a \cdot 0 = 0$ .
- ▶ Mathematical definitions require time to parse. Read carefully!
- ▶ In symbols:  $\forall a, b \in \mathbb{Z} (a \mid b \iff \exists d \in \mathbb{Z} (ad = b))$ .

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example

Background: Given  $a, b \in \mathbb{Z}$ , we say that  $a$  **divides**  $b$ , written  $a \mid b$ , if there exists an integer  $d \in \mathbb{Z}$  such that  $ad = b$ .<sup>1</sup>

- ▶ In symbols:  $\forall a, b \in \mathbb{Z} (a \mid b \iff \exists d \in \mathbb{Z} (ad = b))$ .

**Fact:** For any  $a, b, c \in \mathbb{Z}$ , if  $a \mid b$ , then  $ac \mid bc$ .

- ▶ Formally:  $\forall a, b, c \in \mathbb{Z} (a \mid b \implies ac \mid bc)$ .
- ▶ Assume  $P$ , which is  $a \mid b$ .
- ▶ By definition, there exists  $d \in \mathbb{Z}$  such that  $ad = b$ .
- ▶ Multiply by  $c$ , so  $(ac)d = bc$ .
- ▶ By definition,  $ac \mid bc$ , which is  $Q$ .  $\square$

---

<sup>1</sup>Remember, if  $a$  divides  $b$ , then  $a$  is supposed to be the smaller one.

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .
- ▶ By definition of divisibility, there exist integers  $k, \ell \in \mathbb{Z}$  such that  $ck = a$  and  $c\ell = b$ .

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .
- ▶ By definition of divisibility, there exist integers  $k, \ell \in \mathbb{Z}$  such that  $ck = a$  and  $c\ell = b$ .
- ▶ Add them:  $ck + c\ell = c(k + \ell) = a + b$ .

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .
- ▶ By definition of divisibility, there exist integers  $k, \ell \in \mathbb{Z}$  such that  $ck = a$  and  $c\ell = b$ .
- ▶ Add them:  $ck + c\ell = c(k + \ell) = a + b$ .
- ▶ By definition of divisibility,  $c \mid a + b$ .  $\square$

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .
- ▶ By definition of divisibility, there exist integers  $k, \ell \in \mathbb{Z}$  such that  $ck = a$  and  $c\ell = b$ .
- ▶ Add them:  $ck + c\ell = c(k + \ell) = a + b$ .
- ▶ By definition of divisibility,  $c \mid a + b$ .  $\square$

Similarly,  $c \mid a - b$ .

## Direct Proof: Example II

For any  $a, b, c \in \mathbb{Z}$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid a + b$ .

- ▶ Assume  $c \mid a$  and  $c \mid b$ .
- ▶ By definition of divisibility, there exist integers  $k, \ell \in \mathbb{Z}$  such that  $ck = a$  and  $c\ell = b$ .
- ▶ Add them:  $ck + c\ell = c(k + \ell) = a + b$ .
- ▶ By definition of divisibility,  $c \mid a + b$ .  $\square$

Similarly,  $c \mid a - b$ . In fact, for any  $x, y \in \mathbb{Z}$ , we have  $c \mid xa + yb$ .

## Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

## Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

Proof by contraposition: Prove the contrapositive  $\neg Q \implies \neg P$ .

# Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

**Proof by contraposition:** Prove the contrapositive  $\neg Q \implies \neg P$ .

- ▶ Recall that the contrapositive is *equivalent* to the original implication.

# Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

**Proof by contraposition:** Prove the contrapositive  $\neg Q \implies \neg P$ .

- ▶ Recall that the contrapositive is *equivalent* to the original implication.

When is the contrapositive easier to prove than the original implication?

# Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

**Proof by contraposition:** Prove the contrapositive  $\neg Q \implies \neg P$ .

- ▶ Recall that the contrapositive is *equivalent* to the original implication.

When is the contrapositive easier to prove than the original implication?

- ▶ When  $\neg Q$  gives you more information than  $P$ !

# Proof by Contraposition

Suppose you want to prove an implication  $P \implies Q$ .

- ▶ Recall that the contrapositive is *equivalent* to the original implication.

When is the contrapositive easier to prove than the original implication?

- ▶ When  $\neg Q$  gives you more information than  $P$ !
- ▶ Or... when  $\neg P$  is easier to prove than  $Q$ .
- ▶ Think about how you prove  $\neg Q \implies \neg P$ .
  - ▶ Assume  $\neg Q$ .
  - ▶ Prove  $\neg P$ .

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .
- ▶ So  $n = \sqrt{2k}$ ... which is even... because ...

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .
- ▶ So  $n = \sqrt{2k} \dots$  which is even  $\dots$  because  $\dots$

Try contrapositive:  $n$  is odd  $\implies n^2$  is odd.

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .
- ▶ So  $n = \sqrt{2k} \dots$  which is even... because ...

Try contrapositive:  $n$  is odd  $\implies n^2$  is odd.

- ▶  $n$  is odd, so  $n = 2k + 1$  for some  $k \in \mathbb{N}$ .

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .
- ▶ So  $n = \sqrt{2k} \dots$  which is even  $\dots$  because  $\dots$

Try contrapositive:  $n$  is odd  $\implies n^2$  is odd.

- ▶  $n$  is odd, so  $n = 2k + 1$  for some  $k \in \mathbb{N}$ .
- ▶ Square it:  $n^2 = 4k^2 + 4k + 1 = 2(2k^2 + 2k) + 1$ .

## Proof by Contraposition: Example

For  $n \in \mathbb{N}$ , if  $n^2$  is even, then  $n$  is even.

Try a direct approach:  $n^2$  is even  $\implies n$  is even.

- ▶  $n^2$  is even, so  $n^2 = 2k$  for some  $k \in \mathbb{N}$ .
- ▶ So  $n = \sqrt{2k} \dots$  which is even  $\dots$  because  $\dots$

Try contrapositive:  $n$  is odd  $\implies n^2$  is odd.

- ▶  $n$  is odd, so  $n = 2k + 1$  for some  $k \in \mathbb{N}$ .
- ▶ Square it:  $n^2 = 4k^2 + 4k + 1 = 2(2k^2 + 2k) + 1$ .
- ▶ Therefore,  $n^2$  is odd.  $\square$

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

$$\blacktriangleright (\forall y > 0 (x \leq y)) \implies (x \leq 0).$$

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

$$\blacktriangleright (\forall y > 0 (x \leq y)) \implies (x \leq 0).$$

$\neg Q \implies \neg P$ :

$$\blacktriangleright (x > 0) \implies \neg(\forall y > 0 (x \leq y))$$

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

- ▶  $(\forall y > 0 (x \leq y)) \implies (x \leq 0)$ .

$\neg Q \implies \neg P$ :

- ▶  $(x > 0) \implies \neg(\forall y > 0 (x \leq y))$

- ▶ De Morgan:  $(x > 0) \implies (\exists y > 0 (x > y))$

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

- ▶  $(\forall y > 0 (x \leq y)) \implies (x \leq 0)$ .

$\neg Q \implies \neg P$ :

- ▶  $(x > 0) \implies \neg(\forall y > 0 (x \leq y))$

- ▶ De Morgan:  $(x > 0) \implies (\exists y > 0 (x > y))$

- ▶ Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

- ▶  $(\forall y > 0 (x \leq y)) \implies (x \leq 0)$ .

$\neg Q \implies \neg P$ :

- ▶  $(x > 0) \implies \neg(\forall y > 0 (x \leq y))$

- ▶ De Morgan:  $(x > 0) \implies (\exists y > 0 (x > y))$

- ▶ Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

- ▶ Assume  $\neg Q$ , which is  $x > 0$ .

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

- ▶  $(\forall y > 0 (x \leq y)) \implies (x \leq 0)$ .

$\neg Q \implies \neg P$ :

- ▶  $(x > 0) \implies \neg(\forall y > 0 (x \leq y))$

- ▶ De Morgan:  $(x > 0) \implies (\exists y > 0 (x > y))$

- ▶ Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

- ▶ Assume  $\neg Q$ , which is  $x > 0$ .

- ▶ Can we find a  $y > 0$  such that  $x > y$ ?

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

$$\blacktriangleright (\forall y > 0 (x \leq y)) \implies (x \leq 0).$$

$\neg Q \implies \neg P$ :

$$\blacktriangleright (x > 0) \implies \neg(\forall y > 0 (x \leq y))$$

$$\blacktriangleright \text{De Morgan: } (x > 0) \implies (\exists y > 0 (x > y))$$

$\blacktriangleright$  Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

$\blacktriangleright$  Assume  $\neg Q$ , which is  $x > 0$ .

$\blacktriangleright$  Can we find a  $y > 0$  such that  $x > y$ ?

$\blacktriangleright$  Take  $y = x/2$  (for example).

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

$$\blacktriangleright (\forall y > 0 (x \leq y)) \implies (x \leq 0).$$

$\neg Q \implies \neg P$ :

$$\blacktriangleright (x > 0) \implies \neg(\forall y > 0 (x \leq y))$$

$$\blacktriangleright \text{De Morgan: } (x > 0) \implies (\exists y > 0 (x > y))$$

$\blacktriangleright$  Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

$\blacktriangleright$  Assume  $\neg Q$ , which is  $x > 0$ .

$\blacktriangleright$  Can we find a  $y > 0$  such that  $x > y$ ?

$\blacktriangleright$  Take  $y = x/2$  (for example). Thus,  $\exists y > 0 (x > y)$ .

## Proof by Contraposition: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

$P \implies Q$ :

$$\triangleright (\forall y > 0 (x \leq y)) \implies (x \leq 0).$$

$\neg Q \implies \neg P$ :

$$\triangleright (x > 0) \implies \neg(\forall y > 0 (x \leq y))$$

$$\triangleright \text{De Morgan: } (x > 0) \implies (\exists y > 0 (x > y))$$

$\triangleright$  Note: When using De Morgan's Law for Quantifiers, only the quantifier flips; the universe does **NOT** change.

$\triangleright$  Assume  $\neg Q$ , which is  $x > 0$ .

$\triangleright$  Can we find a  $y > 0$  such that  $x > y$ ?

$\triangleright$  Take  $y = x/2$  (for example). Thus,  $\exists y > 0 (x > y)$ . This is  $\neg P$ .  $\square$

# Pigeonhole Principle

**Pigeonhole Principle:** If you try to place pigeons into holes, when there are more pigeons than holes, then at least one hole must have more than one pigeon.

# Pigeonhole Principle

**Pigeonhole Principle:** If you try to place pigeons into holes, when there are more pigeons than holes, then at least one hole must have more than one pigeon.

Sound obvious?

# Pigeonhole Principle

**Pigeonhole Principle:** If you try to place pigeons into holes, when there are more pigeons than holes, then at least one hole must have more than one pigeon.

Sound obvious?

- ▶ Statement to prove: If there are more pigeons than holes, then at least one hole has more than one pigeon.

# Pigeonhole Principle

**Pigeonhole Principle:** If you try to place pigeons into holes, when there are more pigeons than holes, then at least one hole must have more than one pigeon.

Sound obvious?

- ▶ Statement to prove: If there are more pigeons than holes, then at least one hole has more than one pigeon.
- ▶ **Contrapositive:** If no hole has more than one pigeon, the number of pigeons is at most the number of holes.

# Pigeonhole Principle

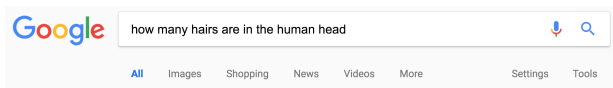

**Pigeonhole Principle:** If you try to place pigeons into holes, when there are more pigeons than holes, then at least one hole must have more than one pigeon.

Sound obvious?

- ▶ Statement to prove: If there are more pigeons than holes, then at least one hole has more than one pigeon.
- ▶ **Contrapositive:** If no hole has more than one pigeon, the number of pigeons is at most the number of holes.
- ▶ *Proof.* Every hole has zero or one pigeons, so the number of holes is at least as big as the number of pigeons. □

# Application of Pigeonhole Principle

The image shows a Google search interface. The search bar contains the text "how many hairs are in the human head". Below the search bar, there are navigation links for "All", "Images", "Shopping", "News", "Videos", "More", "Settings", and "Tools". The "All" link is underlined. The search results section shows "About 31,300,000 results (0.46 seconds)". The main result is a snippet with the heading "100,000 hair" and a paragraph of text.

Probably no one has more than 500000 head hairs.

How many people are in San Francisco?

San Francisco / Population

870,887 (2016)

Pigeonhole Principle:

- ▶ The people of SF are pigeons.
- ▶ The number of head hairs that a person has is a “box”.
- ▶ **Conclusion: There are two people in SF who have the same number of hairs on their heads.**

## Proof by Contradiction

Suppose we want to prove a statement  $P$ .

## Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ .

# Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ . Show that  $R$  (any statement) and its negation  $\neg R$  are both True.

# Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ . Show that  $R$  (any statement) and its negation  $\neg R$  are both True.

- ▶ This is called a **contradiction**:  $R \wedge \neg R \equiv F$ .

# Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ . Show that  $R$  (any statement) and its negation  $\neg R$  are both True.

- ▶ This is called a **contradiction**:  $R \wedge \neg R \equiv F$ .

Why is this valid?

# Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ . Show that  $R$  (any statement) and its negation  $\neg R$  are both True.

- ▶ This is called a **contradiction**:  $R \wedge \neg R \equiv F$ .

Why is this valid?

- ▶ We have proved  $\neg P \implies R \wedge \neg R$ , i.e.,  $\neg P \implies F$ .

# Proof by Contradiction

Suppose we want to prove a statement  $P$ .

Proof by contradiction: Assume  $\neg P$ . Show that  $R$  (any statement) and its negation  $\neg R$  are both True.

- ▶ This is called a **contradiction**:  $R \wedge \neg R \equiv F$ .

Why is this valid?

- ▶ We have proved  $\neg P \implies R \wedge \neg R$ , i.e.,  $\neg P \implies F$ .
- ▶ The contrapositive is  $T \implies P$ .

# Proof by Contradiction

- ▶ This contradicts the statement “for any positive  $y > 0$ , it holds that  $x \leq y$ ” ( $R$ ).
- ▶ We have proven  $R \wedge \neg R$ .
- ▶ Thus,  $x \leq 0$ .  $\square$

## Proof by Contradiction: Example

I have a number  $x \in \mathbb{R}$ . For any positive  $y > 0$ , it holds that  $x \leq y$ . Is it true that  $x \leq 0$ ?

How does the proof look like when we use proof by contradiction?

- ▶ Assume, for the sake of contradiction, that  $x > 0$ .
- ▶ Then,  $x/2$  is a positive number with  $x/2 < x$  ( $\neg R$ ).
- ▶ This contradicts the statement “for any positive  $y > 0$ , it holds that  $x \leq y$ ” ( $R$ ).
- ▶ We have proven  $R \wedge \neg R$ .
- ▶ Thus,  $x \leq 0$ .  $\square$

*Remark:* In higher mathematics, proofs are usually phrased via contradiction rather than contraposition.

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

*Proof.*

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

*Proof.*

- ▶ Assume, for the sake of contradiction, that  $\sqrt{2}$  is rational.

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

*Proof.*

- ▶ Assume, for the sake of contradiction, that  $\sqrt{2}$  is rational.
- ▶ Then, let  $p, q \in \mathbb{Z}$  be such that  $\sqrt{2} = p/q$ .

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

*Proof.*

- ▶ Assume, for the sake of contradiction, that  $\sqrt{2}$  is rational.
- ▶ Then, let  $p, q \in \mathbb{Z}$  be such that  $\sqrt{2} = p/q$ . Let  $p$  and  $q$  be in lowest terms.

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

*Proof.*

- ▶ Assume, for the sake of contradiction, that  $\sqrt{2}$  is rational.
- ▶ Then, let  $p, q \in \mathbb{Z}$  be such that  $\sqrt{2} = p/q$ . Let  $p$  and  $q$  be in lowest terms.
- ▶ Square it!

## Proof by Contradiction: Irrationality of $\sqrt{2}$

Prove that  $\sqrt{2}$  is irrational.

Background:  $x$  is **rational** if there exist  $p, q \in \mathbb{Z}$ , with  $q \neq 0$ , such that  $x = p/q$ .

- ▶ The integers  $p$  and  $q$  can be chosen to be in *lowest form*, i.e., sharing no common factors.

When using proof by cases, save work by eliminating unnecessary cases.

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs.

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ .

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . WLOG  $a = 1$ .

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . WLOG  $a = 1$ . Why?

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . **WLOG  $a = 1$** . Why?

- ▶ If we assume  $a = 1$ , then we prove  $(1 - p) \cdot p^2 + p \cdot (1 - p)^2 \leq 1/4$ .

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . **WLOG  $a = 1$** . Why?

- ▶ If we assume  $a = 1$ , then we prove  $(1 - p) \cdot p^2 + p \cdot (1 - p)^2 \leq 1/4$ .
- ▶ Multiplying both sides by  $a^2$  recovers the result we want.

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . **WLOG  $a = 1$** . Why?

- ▶ If we assume  $a = 1$ , then we prove  $(1 - p) \cdot p^2 + p \cdot (1 - p)^2 \leq 1/4$ .
- ▶ Multiplying both sides by  $a^2$  recovers the result we want.
- ▶ Now we only have to prove a **simpler inequality!**

## Without Loss of Generality

“Without loss of generality”, abbreviated WLOG, is often used in proofs. What does it mean?

Example: Suppose  $p \in (0, 1)$  and let  $a > 0$ ; prove that  $(1 - p) \cdot (ap)^2 + p \cdot (a - ap)^2 \leq a^2/4$ . **WLOG  $a = 1$** . Why?

- ▶ If we assume  $a = 1$ , then we prove  $(1 - p) \cdot p^2 + p \cdot (1 - p)^2 \leq 1/4$ .
- ▶ Multiplying both sides by  $a^2$  recovers the result we want.
- ▶ Now we only have to prove a **simpler inequality!**

WLOG means we are considering a **special case**, but *from this special case we can recover the general case easily*.

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done!

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .
- ▶ Case 2:  $\sqrt{2}^{\sqrt{2}}$  is irrational.

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .
- ▶ Case 2:  $\sqrt{2}^{\sqrt{2}}$  is irrational.
  - ▶ Then,  $(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}} = \sqrt{2}^{\sqrt{2} \cdot \sqrt{2}} = \sqrt{2}^2 = 2$ .

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .
- ▶ Case 2:  $\sqrt{2}^{\sqrt{2}}$  is irrational.
  - ▶ Then,  $(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}} = \sqrt{2}^{\sqrt{2} \cdot \sqrt{2}} = \sqrt{2}^2 = 2$ . This is rational!

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .
- ▶ Case 2:  $\sqrt{2}^{\sqrt{2}}$  is irrational.
  - ▶ Then,  $(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}} = \sqrt{2}^{\sqrt{2} \cdot \sqrt{2}} = \sqrt{2}^2 = 2$ . This is rational! Set  $x = \sqrt{2}^{\sqrt{2}}$ ,  $y = \sqrt{2}$ .

## Proof by Cases: Non-Constructive Proof

Do there exist irrational  $x$  and irrational  $y$  such that  $x^y$  is rational?

Here is a *non-constructive* proof.

- ▶ We know that  $\sqrt{2}$  is irrational.
- ▶ Case 1:  $\sqrt{2}^{\sqrt{2}}$  is rational.
  - ▶ We are done! Let  $x = y = \sqrt{2}$ .
- ▶ Case 2:  $\sqrt{2}^{\sqrt{2}}$  is irrational.
  - ▶ Then,  $(\sqrt{2}^{\sqrt{2}})^{\sqrt{2}} = \sqrt{2}^{\sqrt{2} \cdot \sqrt{2}} = \sqrt{2}^2 = 2$ . This is rational! Set  $x = \sqrt{2}^{\sqrt{2}}$ ,  $y = \sqrt{2}$ .
- ▶ The cases are exhaustive.  $\square$

## Proof by Cases: Non-Constructive Proof

In the previous proof, we split into two cases:

- ▶  $\sqrt{2}^{\sqrt{2}}$  is rational.
- ▶  $\sqrt{2}^{\sqrt{2}}$  is irrational.

# Proof by Cases: Non-Constructive Proof

In the previous proof, we split into two cases:

- ▶  $\sqrt{2}^{\sqrt{2}}$  is rational.
- ▶  $\sqrt{2}^{\sqrt{2}}$  is irrational.

Well... which case is true?!

# Proof by Cases: Non-Constructive Proof

In the previous proof, we split into two cases:

- ▶  $\sqrt{2}^{\sqrt{2}}$  is rational.
- ▶  $\sqrt{2}^{\sqrt{2}}$  is irrational.

Well... which case is true?!

We showed the *existence* of irrational  $x, y$  such that  $x^y$  is rational,

## Proof by Cases: Non-Constructive Proof

In the previous proof, we split into two cases:

- ▶  $\sqrt{2}^{\sqrt{2}}$  is rational.
- ▶  $\sqrt{2}^{\sqrt{2}}$  is irrational.

Well... which case is true?!

We showed the *existence* of irrational  $x, y$  such that  $x^y$  is rational, *without* explicitly saying what values of  $x$  and  $y$  work.

# Proof by Cases: Non-Constructive Proof

In the previous proof, we split into two cases:

- ▶  $\sqrt{2}^{\sqrt{2}}$  is rational.
- ▶  $\sqrt{2}^{\sqrt{2}}$  is irrational.

Well... which case is true?!

We showed the *existence* of irrational  $x, y$  such that  $x^y$  is rational, *without* explicitly saying what values of  $x$  and  $y$  work.

Unsatisfying?

# Proof by Cases: Non-Constructive Proof
